support@AWS Educate [support@awseducate.com]

Greetings ---

Thank you for joining AWS Educate! We want to be certain that you are aware of the signup process for students, as well as for your fellow faculty so that they can take advantage of free Amazon cloud credits, course content, tools and more this school year.

Your students and other educators should sign up for the program at www.awseducate.com, using your institution's email address. The signup should only take 2-5 minutes, and we will approve very quickly. AWS Educate provides:

•   Cloud Credits - *$35 to 100/student/year in AWS credits for use of AWS cloud infrastructure, networking storage, computing, and analytics for in-class labs and assignments. Faculty members gain $75 to $200/year. As long as your institution or department signs up for AWS Educate, you and your students will get the maximum number of credits.

•   Cloud Training – All educators receive free access to the AWS Essentials course (a $700 value), and students receive free access to introductory labs on AWS services when they join AWS Educate

•   Join a Global Discussion – Join discussions like "Models for Adopting AWS in the Classroom," started by Professor Majd Sakr of Carnegie Mellon University.

•   Update and Upgrade Courses – Faculty can access a library of free AWS Educate course materials to incorporate into classwork, including lectures, assignments, labs and data sets provided by other educators or by AWS.

You and your students can also learn more about the program by watching the video tour of the AWS Educate Educator Collaboration Portal. We'll continue to enhance your school's experience with AWS Educate, so dive into it and tell us what you think.

Thank you for helping your students get ready for a future in the clouds!

The AWS Educate Team
